Summary

A highly skilled developer with a strong focus on frontend development and Solidity smart contracts. I specialize in creating responsive and user-centric web interfaces using HTML, CSS, JavaScript, React, and Tailwind CSS. In addition to my frontend expertise, I have extensive experience in building decentralized finance (DeFi) applications, including developing secure smart contracts and stablecoin architectures on Ethereum and other blockchain platforms.

Recent Achievement

LydiaStablecoin Development - About to be Launched (2024)

- Led the development of LydiaStablecoin, an algorithmic stablecoin pegged to the prices of gold (80%), silver (10%), and platinum (10%).
- Integrated secure smart contract functionalities, including real-time asset price oracles, lending services, and transaction fees.
- Enhanced security with reentrancy guard and pausable functionality to ensure contract reliability and robustness.
- Features a 1% transaction fee and a 5% annual loan interest rate, creating a sustainable financial ecosystem within the DeFi space.

Experience

Sept 2024 – Present **Solidity/Java Script Developer Intern**, Astraeus Next Gen Pvt. Ltd.

- Smart Contract Development: Assisted in writing and deploying smart contracts using Solidity on the Ethereum platform and other blockchains.
- Python Java Development: Contributed to the back-end logic of decentralized applications (dApps) and implemented blockchain-related functions using Python and Java.
- Stablecoin Implementation: Worked with the development team on stablecoin architecture, including collateralization models and automated algorithmic systems.
- Blockchain Integration: Helped integrate APIs and third-party tools for blockchain interaction, ensuring secure and seamless communication between applications and the blockchain.
- Testing and Debugging: Tested smart contracts, identified bugs, and ensured security best practices were followed to prevent vulnerabilities.
- Documentation: Maintained detailed documentation of code, smart contract logic, and deployment processes.
- Collaboration: Actively participated in team meetings, code reviews, and brainstorming sessions to contribute ideas and solutions for the project.
- Learning and Development: Gained hands-on experience in developing stablecoin systems and smart contracts, receiving exposure to decentralized finance (DeFi) applications.

Projects

Live Link **Relocation React App**

- The Relocation React App is an adaptable and intuitive application designed to support individuals and businesses through the relocation process. Built with React, this app provides a flexible and scalable solution to manage various aspects of moving to a new location.
- **Key Features:**
 - Customizable Relocation Dashboard: A user-friendly dashboard that can be tailored to meet the specific needs of the relocation process, whether personal or corporate.
 - Task Management: Tools to create, track, and manage tasks associated with the move, ensuring nothing is overlooked.

- Resource Integration: Access to essential resources such as moving checklists, packing tips, and local service providers to facilitate a smooth transition.
- Location Insights: Features that provide information about the new location, including local amenities, transportation options, and neighborhood details.
- Document Management: Secure storage and management of important documents related to the relocation, such as contracts, inventory lists, and moving agreements.

- Technologies Used: React

Live Link **Book Rental App**

- Developed a comprehensive book rental application leveraging Tailwind CSS for a sleek and responsive design.
- User Interface: Designed an intuitive and visually appealing interface using Tailwind CSS, ensuring a responsive and user-friendly experience across devices.
- Book Management: Implemented features for users to search for books, view detailed descriptions, and manage their rental status.
- Technologies Used: HTML, CSS, JavaScript, React.js, Tailwind CSS.

Live Link **XYZ React App**

- Created a customizable React application with a modular architecture for adaptable service frameworks.
- Key Features: Adaptable frameworks, user-friendly interfaces, and modular scalability.
- Technologies Used: React

Technical Skills

Languages: HTML (3 years), CSS (3 years), JavaScript (3 years), React.js (3 years), Tailwind CSS (1 year), Python (Flask) (3 years), Solidity (Smart Contracts) (1.5 years). **Tools:** Hardhat, TensorFlow, Pandas, NumPy, SQL (3 years).

Education

Aug 2018 – May 2021 **Guru Gobind Singh College**, Maharashtra, India
Bachelor of Mechanical Engineering

Certificates

Frontend Development, Family Computers, 2024
